

SAMANEH ROSTAMI POUR

• Senior Product Designer • Product Strategy • Design Systems & Product Infrastructure

Building complex products from ambiguity to scalable experiences — combining product strategy, systems thinking, and end-to-end product design across fintech, insurance, telecom, and enterprise products.

PROFESSIONAL SUMMARY

Senior Product Designer with 5+ years of experience designing complex enterprise and consumer products across fintech, insurance, and Financial. Experienced in leading end-to-end product initiatives from problem framing and discovery through interaction design, design systems, product infrastructure, and delivery. Experienced as a sole designer on 0→1 products and cross-functional initiatives, as well as contributing to platform-wide design transformation. Strong in regulated product design, trust architecture, systems thinking, and AI-augmented research and design workflows.

CORE EXPERTISE

Product Strategy & Discovery

•Product Strategy •Product Discovery •Problem Framing •0→1 Product Design •MVP Definition •Feature Prioritization •Competitive Analysis •Customer Experience •Data-informed Decision Making •Product Architecture •Omnichannel Product Design •Multichannel Product Design

Design Systems & Product Infrastructure

•Design Systems •Design Governance •DesignOps •Design Tokens •Semantic Tokens •Component Architecture •Design-to-Code •Figma Variables

Research & UX

•User Research •Usability Testing •Information Architecture •Journey Mapping •Service Design •User Flows •Interaction Design •Wireframing •Prototyping •Enterprise UX •Consumer UX

Cross-functional Collaboration

•Stakeholder Alignment •Product Collaboration •Engineering Collaboration •Legal & Compliance •Risk Collaboration •Developer Handoff •Agile •Design Critique

Domains

•Fintech •Insurance •Regulated Products •Investment & Capital Markets •Telecom •Enterprise Products •B2B •B2C •Multi-channel Platforms

AI

•AI-augmented Research •AI-assisted Product Discovery •AI-assisted Design Workflows •Generative AI •Prompt Engineering

Senior Product Designer (Led 0 to 1 per project)

December 2024 – Present

DOTIN — ENTERPRISE INSURANCE PLATFORM FOR PASARGAD INSURANCE

TEHRAN, IRAN

Sayban Insurance Platform — Product Redesign & Design Infrastructure

- Joined as the organization's first Product Designer in an environment with no established UX KPIs, analytics infrastructure, or design system; established 9 baseline metrics before redesigning, including Completion Rate (58%), Error Rate (14%), First-Time Success Rate (38%), Rework Rate (31%), and Agent CSAT (2.8/5).
- Reframed the initiative from improving a single insurance issuance form into a broader redesign of the Sayban insurance management system, supporting 10+ insurance lines and multiple user groups including agents, branch managers, headquarters staff, support teams, and specialists.
- Conducted stakeholder interviews, user questionnaires, and usability testing with 5 users, including 3 expert insurance agents and 2 regular users; synthesized findings through Affinity Mapping, Journey Mapping, Empathy Mapping, 3 personas, Competitive Analysis, Value Proposition Canvas, and Information Architecture.
- Designed end-to-end experiences across complex insurance workflows and translated operational requirements into reusable interaction patterns and scalable product foundations.
- Architected standardized business components based on ShadCN UI, collaborating directly with frontend engineering on locally developed components and the foundation for a UI Generator initiative.
- Built a 40+ component design system with semantic tokens, Figma-to-code mapping, and multi-theme support for multiple Riton clients.
- Designed an Advanced Search experience and reusable Data Table framework adopted across 4 product modules, while improving navigation architecture through card sorting research with 8 insurance agents.

linkedin.com/in/sarinaros/

behance.net/sarinarostami1

- Established the organization's **first design governance framework**, including Design Brief, RACI matrix, Design QA / UX Check, Handoff standards, and a delivery model enabling analysts and frontend developers to work more independently under design oversight.

Selected Outcomes

- Completion rate improved from approximately 58% to 73%.
- Validation errors reduced by approximately 45%.
- Search filter adoption more than doubled.
- Reusable Data Table adopted across 4 product modules.
- Approximately 20% reduction in form-related support tickets.
- No unauthorized UI changes recorded after the governance rollout.

UnitLink — Consumer Digital Investment Platform | 0→1 Product Design & Product Strategy · In Progress

- Leading product design and contributing to product strategy for **UnitLink**, Pasargad Insurance's consumer digital investment platform, combining **9 investment fund types with life insurance** and leveraging the broader **Vipod digital bank and Pasargad Insurance ecosystem**.
- Started the product **from zero** alongside the Product Manager, CTO, frontend, and backend teams, helping shape the product through early discovery and problem definition.
- Conducted competitive analysis across **8 players in 3 market layers**, developed **3 data-backed personas**, and built a **7-phase × 8-layer Experience Map** that identified **trust as the primary product challenge**.
- Defined an **MVP roadmap of 35 features across 4 priority tiers** using the MoSCoW framework, including **10 Must-Have features** for the initial gold-focused launch.
- Designed a **trust-first product architecture** including a pre-signup investment calculator, transparent fee visualization using a **94/4/2 breakdown**, life insurance positioning, and the **Spouse Test principle** to challenge clarity and user confidence in key decisions.
- Integrated **AI into research and design workflows** to accelerate analysis and synthesis while maintaining human judgment and research depth.
- Defined **pre-launch product KPIs**, including **Sign-up Completion above 80%**, **Time to First Investment below 5 minutes**, **Calculator Usage above 60%**, and **Risk Quiz Completion above 90%**.

Status: •Discovery complete •MVP approved •Wireframing •Hi-Fi •Lunching

Product Designer

February 2022 – December 2024

HAMRAH AVAL — EWANO FINTECH PLATFORM

TEHRAN, IRAN

Digital Credit — 0→1 Regulated LendTech Product

- Served as the **sole Product Designer** for Ewano's LendTech micro-credit platform, developed in collaboration with Ewano's fintech team and **Hampa**, a joint venture of Hamrah Aval and Bank Parsian.
- Designed the **product infrastructure from zero**, including credit activation flows, credit management dashboards, card management, and installment management experiences.
- Shipped the product as a **new financial service across B2C, B2B, and CIP channels**.
- Worked closely **with Product, Risk, Legal, and Engineering teams** to translate financial, regulatory, and operational requirements into understandable product experiences, including clearer visual repayment breakdowns.
- Designed a **complete decision-state architecture** with the Risk team, mapping **8+ key user states across the credit lifecycle**, from eligibility and application through review, approval, disbursement, repayment, and completion.
- Maintained consistent product logic across channels while adapting interactions to different user contexts and service models.

Selected Outcomes

- Launched from 0→1 across 3 service channels.
- Achieved zero compliance incidents post-launch.
- Established as a **new revenue stream for the platform**.
- The visual repayment format was subsequently adopted by the Risk team for other financial products.

Ewano Platform Redesign & Design System

- Requested **Google Analytics setup** to establish **quantitative UX baselines** alongside stakeholder interviews, support feedback, and questionnaires distributed to Ewano users and potential users.
- Identified key user needs and product expectations around wallet, store, cashback, card-to-card transfers, and B2B welfare baskets.
- Combined qualitative findings with available quantitative signals to identify **design inconsistency and fragmented experiences as major product problems**, alongside payment and service-related error signals.
- Secured executive buy-in by creating and presenting a **Wall of Inconsistency**, revealing **14 button styles, 5 color palettes, and 9 input patterns across 8 independently developed product modules**.
- Reframed the initiative from visual cleanup into **shared product infrastructure** and built a unified design system with semantic tokens, an atomic component library, Auto Layout, Variants, Figma-to-code mapping, and reusable patterns.

- Requested **Google Analytics setup to establish quantitative UX baselines** alongside stakeholder interviews, support feedback, and questionnaires distributed to Ewano users and potential users.
- Established **governance processes, contribution workflows, and semantic versioning** to support adoption and long-term evolution of the system.
- Collaborated with engineering through shared specifications and regular alignment to improve consistency between design and implementation.

Selected Outcomes

- Standardized 120+ reusable components.
- Reduced button variants from 14 to 4.
- Consolidated color palettes from 5 to 1.
- Unified 8 product modules under a shared design system and governance model.

SELECTED PRODUCT HIGHLIGHTS

Building Products from 0→1

Across several projects, I have worked on **products and product infrastructure from the ground up**, often in ambiguous environments where the problem, product scope, and experience architecture were not yet fully defined. My role has extended beyond designing interfaces to helping shape **early product direction, MVP scope, complex workflows, and experience architecture**.

This includes designing a **regulated micro-credit product across multiple service channels** and shaping the **early product strategy and MVP of a digital investment platform**.

Designing Product Infrastructure

Across multiple projects, I have contributed to **the infrastructure that enables products and teams to scale**—including reusable components, semantic tokens, shared interaction patterns, design-to-code alignment, contribution workflows, and design governance.

For me, a design system is not simply a tool for visual consistency. I see it as **shared product infrastructure** that can improve collaboration, reduce repeated work, and create more consistent and predictable product experiences.

Working at the Intersection of Design and Business

My work has involved close collaboration with **Product, Engineering, Risk, Legal, and operational teams**. Particularly in financial and insurance products, effective design requires understanding constraints that extend beyond the interface.

I have experience **translating business rules, operational complexity, and regulatory requirements** into experiences that remain understandable and usable for end users.

Turning Complexity into Structure

A recurring theme in my work is **bringing structure to complex product environments**—from fragmented insurance workflows and high-stakes financial decisions to independently developed product modules without a shared design language.

Rather than treating each issue as an isolated screen or flow problem, I focus on **identifying the underlying system behind visible UX challenges** and addressing problems at the appropriate level.

Research Before Redesign

I prefer not to jump directly into redesigning an interface. In projects where research or analytics infrastructure did not already exist, I have helped establish **quantitative baselines** and combine them with stakeholder insights, user feedback, usability testing, and journey-level analysis before defining solutions.

This approach has repeatedly shown that **what appears to be a UI problem may actually be part of a broader product or systemic challenge**.

AI as Part of My Design Workflow

I actively use **AI throughout research and product design workflows**, particularly to support exploration, analysis, synthesis, and iteration. My goal is to use AI to **increase the speed and breadth of my work—not to replace product thinking, validation, or human judgment**.

This approach helps me move faster through ambiguous early-stage work while maintaining a **structured, thoughtful, and evidence-informed design process**.

TOOLS

Design | Figma (Variables, Components, Dev Mode) | Adobe Illustrator | Adobe Photoshop | Figma Lottie

AI | ChatGPT | Claude | Gemini | AI-assisted research & design workflows

Collaboration | Jira | Notion | Miro | Trello

Front-end | HTML | CSS | Figma Make
