

SAMANEH ROSTAMI POUR

Senior Product Designer · Design Lead

Tehran, Iran · Open to Remote — EU / UK / UAE

Building complex products from ambiguity to scalable experiences — combining product strategy, systems thinking, and end-to-end product design across fintech, insurance, telecom, and enterprise products.

PROFILE

Senior Product Designer with 5+ years of experience designing complex digital products across insurance, fintech, financial services, and enterprise platforms.

I work across product strategy, discovery, UX architecture, design systems, and product delivery, with a focus on products where business strategy, user needs, regulatory requirements, and technical complexity intersect.

My work spans 0→1 product development, product and platform rebuilding, regulated financial experiences, scalable design systems, and governance. I collaborate closely with Product, Engineering, Legal, Risk, and business stakeholders to turn complex product problems into scalable products, systems, and experiences.

CORE EXPERTISE

Product Strategy & Discovery

•Product Strategy •Product Discovery •Problem Framing •0→1 Product Design •MVP Definition •Feature Prioritization •Competitive Analysis •Customer Experience •Data-informed Decision Making •Product Architecture •Omnichannel Product Design •Multichannel Product Design •Product Discovery & Research •Stakeholder Interviews •Experience Mapping •Prioritization

Product & UX Architecture

•Design Systems •Design Governance •Design Tokens •Business Components •Component Architecture •Figma ↔ Code Mapping •RTL Design •User Research •Usability Testing •Information Architecture •Complex Workflow Design •Service Design •Interaction Design •Wireframing •Prototyping •Enterprise UX •Consumer UX •Component Architecture •Interaction Design •Trust Architecture •Personalization

Complex & Regulated Products

•Fintech •Insurance •LendTech •Investment & Capital Markets •Financial Products •Enterprise Products •B2B •B2C •Multi-channel Platforms •Omni-channel Platforms

Cross-functional Collaboration

•Stakeholder Alignment •Product Collaboration •Engineering Collaboration •Legal & Compliance •Risk Collaboration •Developer Handoff •Agile •Design Critique

Product Leadership & Collaboration

•Stakeholder Alignment •Cross-functional Collaboration •Legal & Risk Collaboration •Engineering Partnership •Design Governance •Data-informed Decision Making

AI

•AI-assisted Discovery •Research Synthesis •Component Generation •AI-supported Exploration •Human-in-the-loop Design

EXPERIENCE

Senior Product Designer · Design Lead

December 2024 – Present

DOTIN — ENTERPRISE INSURANCE PLATFORM

TEHRAN, IRAN

Sayban — Enterprise Insurance Platform

Joined as the organization's **first Product Designer** to redesign Sayban, an enterprise insurance management platform serving **10+ insurance lines** and **5 user personas**.

- Started with stakeholder interviews, structured user questionnaires, and usability testing with **5 users** to establish an evidence-based understanding of the existing product.
- Identified that the core problem was not simply the number of steps, but **structural inconsistency and cognitive overload across independently built insurance workflows**.
- Established baseline KPIs around **completion, validation errors, time-on-task, first-time success, rework, support tickets, and CSAT** before redesign.
- Reframed the initiative from “fix broken forms” to “build a platform that scales itself.”
- Redesigned core insurance workflows and established **shared interaction patterns across 10+ insurance lines**.
- Architected reusable **business components** that encapsulated interaction behavior, validation rules, states, and conditional logic.

- Collaborated directly with frontend engineering to establish the foundation for a **UI Generator**, allowing standardized business components to be configured rather than redesigned from scratch.
- Built a **design system** in parallel with the redesign, including **semantic tokens**, **reusable components**, **RTL support**, **multi-theme architecture**, and **Figma ↔ code mapping**.
- Established **governance** through Design Briefs, contribution guidelines, semantic versioning, review processes, and contractual design-system documentation.
- Worked across **Product, Engineering, Analysis, Compliance, and business stakeholders** to move Design from interface production toward **product infrastructure and governance**.

Selected Evidence

• ~58% → ~73% completion • ~14% → ~8% validation errors • ~38% → ~64% first-time success • ~31% → ~12% rework • ~35% estimated reduction in time-to-launch new products • 10+ insurance lines • 5 personas

UnitLink — Pasargad Insurance Investment Platform

Leading product design for a **0→1 consumer investment platform** combining investment, insurance, and banking capabilities.

- Defined the **product strategy**, **trust architecture**, and **MVP direction** from the ground up.
- Conducted competitive analysis across **8 players** and developed **3 data-backed personas**.
- Created a **7-phase experience map** to identify user uncertainty, trust barriers, and product opportunities.
- Defined **35 MVP features** across **4 priority tiers** using MoSCoW prioritization.
- Designed a **personalization framework** connecting **12 user profile combinations** to recommended investment packages.
- Designed the **product architecture** across trust, personalization, investment operations, insurance, and engagement layers.
- Used **AI as a research amplifier** to compress the discovery process from **8 weeks to 3**, while keeping product judgment and validation human-led.
- Current status: **Discovery complete** · **MVP defined** · **15 wireframes** · **entering high-fidelity design**.

Project status: In Progress

Product Designer

February 2022 – December 2024

HAMRAH AVAL — EWANO FINANCIAL PLATFORM

TEHRAN, IRAN

Product Rebuilding · Digital Credit · Design Systems · Product Infrastructure

Ewano — Platform Rebuilding & Design System

Sole Product Designer for a new **digital credit service** developed within the Ewano financial platform and delivered across **B2C, B2B, and CIP channels**.

- Designed the **end-to-end credit experience** from activation and eligibility through credit management, card management, and installment repayment.
- Designed for users entering a financial context where they had **no established mental model for credit**.
- Worked closely with **Legal, Risk, Engineering, and fintech stakeholders** throughout product development.
- Co-designed **8+ lifecycle / decision states** with Risk to translate complex eligibility logic into understandable user experiences.
- Established **progressive disclosure and financial transparency patterns** to reduce uncertainty around credit decisions.
- Shipped the product as a **0→1 service with zero compliance incidents**.

Selected Evidence

0→1 · 3 channels · 12 legal terms · 8+ decision states · Zero compliance incidents

Ewano — Platform Rebuilding & Design System

Led a ground-up rebuilding initiative for Ewano as its business strategy shifted toward a broader digital financial ecosystem, spanning digital wallet, digital credit, and partnerships across B2C and B2B contexts.

- Started with research and discovery, combining stakeholder interviews, user and potential-user questionnaires, support feedback, and available quantitative signals to understand the existing product and emerging user needs.
- Synthesized findings through affinity mapping, personas, competitive analysis, MVP definition, information architecture, and user flows to establish a new product direction.
- Identified fragmented experiences and inconsistent product patterns as systemic problems rather than isolated UI issues.
- Reframed the initiative from redesigning individual interfaces into rebuilding the product experience and shared infrastructure from the ground up.
- Recognized the need for a unified design system and organizational design language and collaborated as part of a team to build it from 0→1.
- Standardized 120+ reusable components and consolidated patterns across 8 independently developed product modules.
- Reduced button variants from 14 to 4 and color palettes from 5 to 1, creating a more coherent product language.

- Established contribution workflows, governance processes, semantic versioning, documentation, and Figma ↔ code mapping to support long-term adoption.
- Designed RTL-native components and addressed bidirectional interaction patterns.
- Focused on governance and adoption so the system could continue evolving beyond the original design team and through team transitions.

Selected Evidence

8 → 1 modules · 120+ components · 14 → 4 button variants · 5 → 1 color palettes · ~40% faster feature design · ~55% fewer developer clarification requests · ~87% component reuse

SELECTED PRODUCT WORK

Sayban — Enterprise Insurance Platform

Enterprise SaaS · Insurance · B2B · Design Systems

Digital Credit — Ewano

LendTech · Financial Services · 0→1 · B2B / B2C / CIP

UnitLink — Pasargad Investment Platform

Fintech · Insurance · Consumer · 0→1 · In Progress

Ewano — Platform Rebuilding & Design System

Product Rebuilding · Design Systems · Governance · Consumer Financial Platform

EDUCATION

AI Product Management | Fanap Campus 2026

Professional Development

Product Design & Discovery | Amanj Academy 2023

Professional Development

M.Sc. Industrial Design | Alzahra University 2020 – 2022

Thesis: Systems thinking applied to digital product design

B.Sc. Industrial Design | Art University of Isfahan 2015 – 2019

Bachelor of Arts in Industrial Design, Art University of Isfahan

ADDITIONAL FOCUS

Product Strategy

Problem framing · Research & Discover · Discovery · MVP strategy · Prioritization · Experience mapping · Product rebuilding

Systems Thinking

Design systems · Business components · Governance · Component architecture · Shared Product Infrastructure

Regulated Product Design

Insurance · Fintech · LendTech · Financial products

Product Leadership

Stakeholder alignment · Cross-functional decision making · Engineering collaboration · Design governance

AI-Augmented Design

Research acceleration · Competitive synthesis · Product exploration · Component generation
